

CAPI SNAP Education Series: User Guide

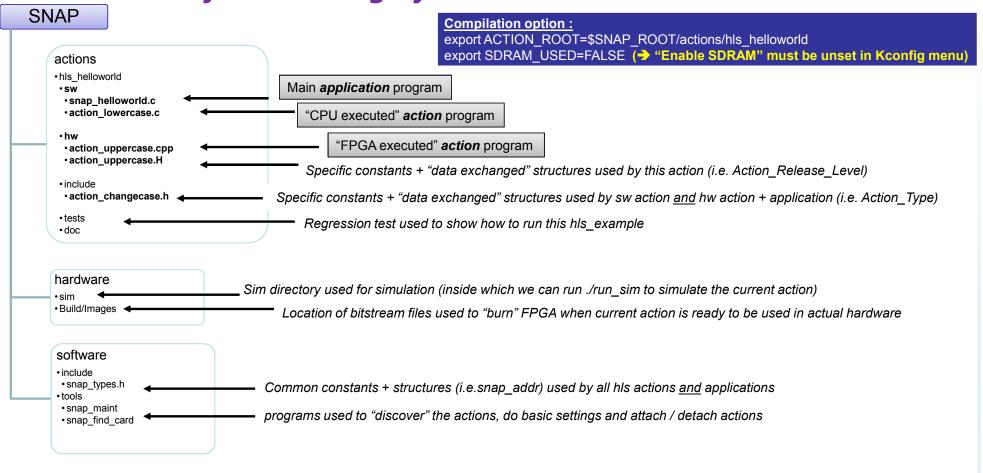

CAPI SNAP Education hls_helloworld : howto? V2.2

Architecture of the SNAP git files

Action overview

Purpose: Providing to a 1st SNAP user a simple example to let him understand how different files work together.

Access to external interfaces are:

Host memory server

When to use it:

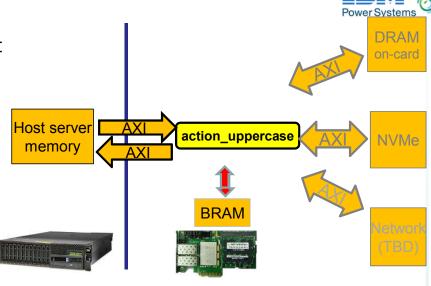

Understand Basic access

Memory management:

- Application is managing address of Host memory
- Data are read 64B words one after the other

Known limitations:

- HLS requires transfers to be 64 byte aligned and a size of multiples of 64 bytes
- DDR simulation model reads will return wrong values if non 64 bytes words or non initialized words are read (this is due to the simulation model only)

CAPI SNAP Enabled Card

Action usage

```
<u>Usage:</u> ./snap_helloworld [-h] [-v, --verbose] [-V, --version]
            -C, --card \langlecardno\rangle can be (0...3)
            -i, --input <file.bin>
                                      input file.
            -o, --output <file.bin>
                                      output file.
            -A, --type-in <CARD DRAM, HOST DRAM, ...>.
            -a, --addr-in <addr>
                                       address e.g. in CARD RAM.
            -D, --type-out <CARD DRAM, HOST DRAM, ...>.
            -d, --addr-out <addr>
                                      address e.g. in CARD RAM.
            -s, --size <size>
                                      size of data.
            -t, --timeout
                                     timeout in sec to wait for done.
            -X, --verify
                                     verify result if possible
            -N, --no-ira
                                     disable Interrupts
```

Example:

```
export SNAP TRACE=0x0
snap maint -vvv
rm /tmp/t2; rm /tmp/t3
vi /tmp/t1
     Hello world. This is my first CAPI SNAP experience. It's real fun!
```

```
$SNAP CONFIG=FPGA snap helloworld -i /tmp/t1 -o /tmp/t2
$SNAP CONFIG=CPU snap helloworld -i /tmp/t1 -o /tmp/t3
echo "Display input file"; cat /tmp/t1
Hello world. This is my first CAPI SNAP experience. It's real fun!
echo "Display output file from FPGA EXECUTED ACTION"; cat /tmp/t2
HELLO WORLD. THIS IS MY FIRST CAPI SNAP EXPERIENCE. IT'S REAL FUN!
echo "Display output file from CPU EXECUTED ACTION"; cat /tmp/t3
hello world. this is my first capi snap experience. it's real fun!
                                 SNAP Framework built on Power™ CAPI technology
```

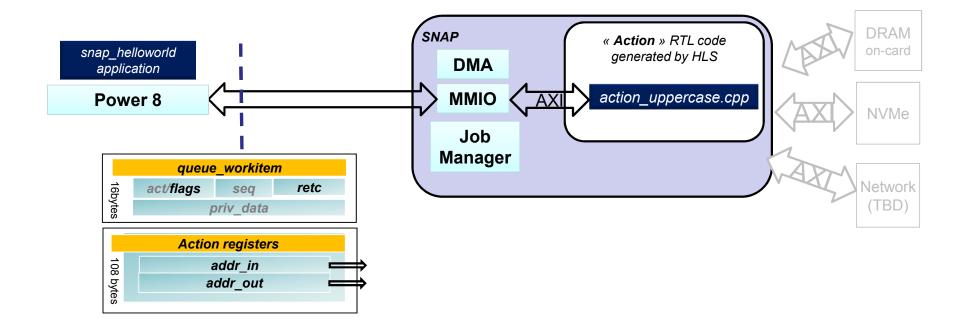

Options: (default option in **bold**) **SNAP TRACE = 0x0 \rightarrow** no debug trace

SNAP TRACE = $0xF \rightarrow full debug trace$ **SNAP CONFIG = FPGA→** hardware execution

SNAP CONFIG = CPU - software execution

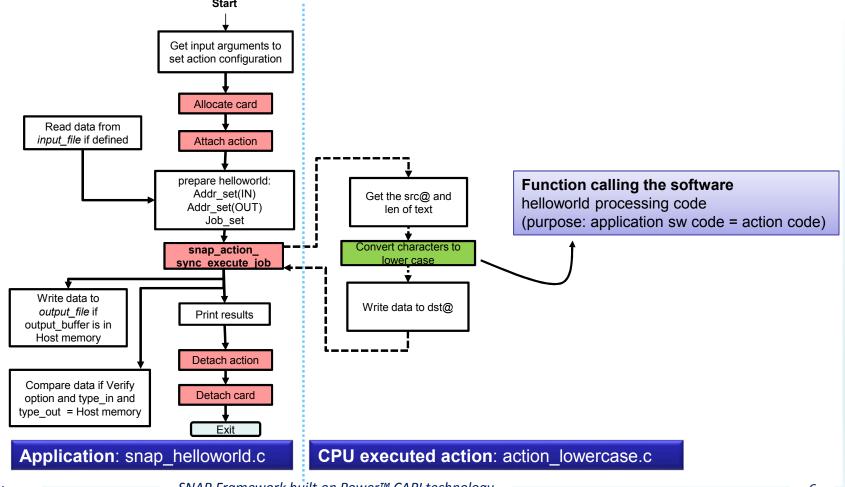

helloworld registers

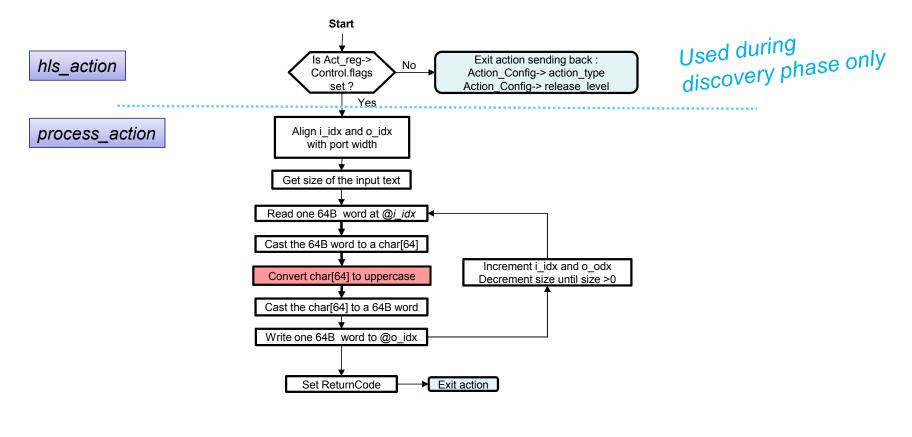

Application Code + software action code: what's in it?

Hardware action Code: what's in it?

FPGA executed Action: action_uppercase.cpp

Constants - Ports

Constants: → \$ACTION_ROOT = snap/actions/hls_helloworld

Constant name	Value	Туре	Definition location	Usage
HELLOWORLD_ACTION_TYPE	0x10141008	Fixed	\$ACTION_ROOT/include/action_changecase.h	helloworld ID - list is in snap/ActionTypes.md
RELEASE_LEVEL	0x00000022	Variable	\$ACTION_ROOT/hw/action_uppercase. H	release level – user defined

Ports used:

Ports name	Description	Enabled
din_gmem	Host memory data bus input Addr : 64bits - Data : 512bits	Yes
dout_gmem	Host memory data bus output Addr : 64bits - Data : 512bits	Yes
d_ddrmem	DDR3 - DDR4 data bus in/out Addr : 33bits - Data : 512bits	NOT used
nvme	NVMe data bus in/out Addr : 32bits - Data : 32bits	No (soon)
